System Setup and Usage Documentation

Clinic Management System

Overview

The Clinic Management System is a desktop application built with Python's tkinter library. It is designed to help manage clients, doctors, and their appointments efficiently. The system allows users to add, update, and remove clients and doctors, and manage their appointments through a calendar interface.

Requirements

- Python 3.x

- Tkinter (included in standard Python installation)

- SQLite3 (included in standard Python installation)

- Ensure you have the required libraries installed

pip install tkcalendar

Features

- ## Client Management:

  - Add new clients.

  - Update existing client information.

  - Remove clients.

  - View a list of all clients.

Doctor Management:

- Add new doctors.

- Remove doctors.

- View a list of all doctors.

Appointment Booking:

- Book appointments for clients with specific doctors.

- View a calendar to select appointment dates.

- View a list of all bookings.
